

IST 263 Project Milestone 6 – First Draft Using CSS

Name: Omar Camara

Description:

For the project, I plan on making a portfolio website to showcase any skills, work, and future projects that I may complete. On it, I would have a general overview of who I am and what my title is, on another page, I would have projects that I've completed, I would have a copy of my resume, a list of services I would provide, and finally, I would include contact information such as an email, LinkedIn, and my GitHub for potential employers to reach me with.

What is the url of the page you choose to work on for this part?

<https://username273183.github.io/ist263/project6/>

Paste a screen shot of the wireframe you created for this page below.

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc maximus, nulla ut commodo sagittis, sapien dui mattis dui, non pulvinar lorem felis nec erat

Provide the URL of the WAVE checker for this page below.

<https://wave.webaim.org/report#/https://username273183.github.io/ist263/project6/>

Provide the URL of the HTML validator for you page below.

<https://html5.validator.nu/?doc=https%3A%2F%2Fusername273183.github.io%2Fist263%2Fproject6%2F>

If something went wrong in this part, describe what happened and how you can fix it moving forward.

Examples of problems could be, page isn't responsive, page doesn't look like wireframe, etc.

My page ended up looking different from the original wireframe plan that I had. This is because I couldn't get the photo to show up fully on the screen, while also staying to the left. Moving forward, I could try to think of the practicality how my wireframe could be put on the page and make a plan based off of that.
